Make it Stick . . . Looking for a way to get things to adhere in your craft and home improvement projects? DAP's new Weldwood Spray Adhesives may be just what you have in mind.

The *Multipurpose Spray Adhesive* can be used for temporary or permanent bonding of light weight materials such as foil, cardboard, paper, foam and felt. The *High Strength Spray Adhesive* has a high temperature web spray formula. It creates high strength bonds between wood, particleboard, laminate, metal and plastic, among other materials. The products comply with even the most stringent Volatile Organic Compound (VOC) limits in the South Coast Air Quality Management District in southern California. These spray adhesives come in 16-ounce cans and retail for \$6.49 to \$8.59, respectively. For more information, visit www.DAP.com.
