

# WOOD FILLER TO THE RESCUE!

Tools you will need to repair your furniture:

DAP Plastic Wood Wood Filler  
Plastic Scraper tool  
150 Grit Sandpaper

## INSTRUCTIONS

1. The veneer had broken off in several places, leaving noticeable gouges in this dresser. We used DAP Plastic Wood Wood Filler, applied with a scraper in thin layers, to fill in the gouges.
2. Once dry, the Plastic Wood was sanded down using 150 grit sandpaper, which is pretty fine.
3. The drawer hardware was removed and the whole dresser was sanded down to remove the original gloss finish. The dresser was then wiped down to remove all sanding dust.
4. First the dresser was primed to ensure the paint will stick. Once dry, the dresser was painted with two coats of Sherwin Williams Canvas Tan.
5. To finish it off, a few light coats of satin Polycrylic were painted on to protect the paint. The hardware was given a new coat of spray paint to freshen it up.
