DAP® Concrete Bonding Additive

PRODUCT DESCRIPTION

DAP® Concrete Bonding Additive is an advanced vinyl compound that can be used to create a high moisture resistant, high density concrete. As a primer, DAP Concrete Bonding Additive is perfect for new or old concrete patching, resurfacing and leveling. It is excellent for capping walls, patching steps and tuck pointing. For interior and exterior use.

KEY FEATURES & BENEFITS

- Bonds old concrete to new concrete
- For capping walls, resurfacing, patching & tuck pointing
- Primer and Admix in one
- Multi-Use adhesion
- Interior/Exterior

SUGGESTED USES

Ideal for applying as a coating or mixing into mortar for:
- Repairing cracks in steps, walks, driveways and patios.
- Tuck pointing old mortar joints of brick and concrete.
- Resurfacing and leveling of old concrete slabs and walls
PERFORMANCE CHARACTERISTICS

- Locks in moisture to allow for improved curing of concrete.
- Stops moisture suction into old concrete to ensure perfect patching.
- Enables resurfacing with a thin layer of concrete without cracking.
- May be applied as a coating or mixed into mortar for repairs

APPLICATION

Admix Solution:
- Prepare by making a solution of 1 measure of additive added to 4 measures of clean water.

Mortar Mix:
- Use packaged dry "Topping Mix" or 1 measure of Portland Cement mixed with 4 measures of sharp, clean sand.
- Add enough Admix Solution to the dry mix to form a stiff mortar. Thin, wet mixes cause shrinkage and cracking.

Patching Concrete Steps, Curbs or Joining New Concrete:
- Surface must be free of grease, oil and other foreign matter. Sweep or blow surface with compressed air to remove all mud, dirt, dust and other loose debris.
- Prime coat the surface to be patched with undiluted DAP® Concrete Bonding Additive. When the prime coat is tacky, apply fresh mortar which has been made using the Admix Solution. Do not allow the prime coat to dry out. If the prime coat does dry out, apply a second coating of the DAP Concrete Bonding Additive and repair immediately.

Tuck Pointing:
- For an extra strong mortar for brick, applying wall caps, tuck pointing and filling cracks, use a Mortar Mix as indicated above.

Resurfacing Walls and Floors:
- Remove all foreign material from concrete area to be resurfaced.
- TEST FOR BOND: Traces of silicates, silicones, etc., used for sealing and waterproofing, may prevent a bond of new material. Make a test patch before proceeding.
- PRIME with a mixture of 4 parts DAP Concrete Bonding Additive mixed with 1-part clean water. Use an extra prime coat on all areas where new concrete will be feather edged.
- WET THE CEMENT/SAND MIX with a solution of 1-part DAP Concrete Bonding Additive mixed with 4 parts clean water.

Caution: Use only sharp, crushed stone free of clay and humus along with an ample ratio of cement. Do not use river sand. DO NOT USE BELOW 50°F.

</table>
| Coverage               | Quart: Will prime and patch area plus reinforce a 60 lb. sack of dry-mix concrete.  
                          | Gallon: Allow 1-gallon DAP® Concrete Bonding Additive per sack of pure dry cement or 1 to 1-1/2-gallon  |

CLEAN UP & STORAGE

Before drying, remove excess additive with a damp cloth. Dried additive must be cut of scraped away. Be sure container lid is closed and tightly sealed. Store at room temperature 40-80ºF.

SAFETY

See product label and Safety Data Sheet (SDS) for health and safety information. You can request an SDS by visiting our website at dap.com or by calling 888-DAP-TIPS.
WARRANTY

**Limited Warranty:**
If product fails to perform when used as directed, within one year of date of purchase, call 888-DAP-TIPS, with your sales receipt and product container available, for replacement product or sales price refund. DAP Products, Inc. will not be responsible for incidental or consequential damages.
