**DAP Unveils High-Performance One and Two-Component Spray
Foam Kits Reformulated to Reduce Environmental Impact**

New DAP Spray Foam Kits Combine Superior Insulating Performance with Low GWP

BALTIMORE – January 6, 2021 – DAP has optimized its premium one and two-component Touch ‘n Foam® Professional and Touch ‘n Seal® spray foam products to provide superior insulating properties and lessen the impact on the environment with a lower Global Warming Potential (GWP). The reformulated foam kits, developed to meet changing hydrofluorocarbon (HFC) regulatory requirements in low-pressure polyurethane spray foams, are now available for purchase in select states with additional markets to follow.

“At DAP, we pride ourselves on our ability to innovate and provide sustainable, high-performing products that contractors and pro insulators rely on and trust,” said Jason Wirth, Senior Director Product Management at DAP. “Our new spray foam kits not only meet new state HFC regulations for low GWP, but also feature exceptional insulating performance, including improved R-values to meet all codes. We are working hard to ensure a smooth transition to these new and improved foam products for our customers.”

DAP one and two-component closed cell foam kits feature superior insulation properties with an improved R-value of 6.6 and meet all codes, regulatory requirements and are ICC and CCMC Listed. The kits consist of a fast-drying formula that is Class A Fire Rated.

DAP also has improved the spray foam application experience for contractors with the introduction of the new Anti-Crossover Applicator and improved static mixer nozzles.

“Users will experience improved flow and uniformity of the foam products as a result of our new applicator and updated mixer nozzles that offer better spray speed and consistency throughout the life of the kit, especially near the end of the tanks,” said Wirth.

DAP spray foam kits are available in a wide formula range for the professional, from one component to two component 1.0-3.0 PCF for air sealing and energy saving applications. For more information, visit www.dap.com.
